Building the future in molecular biology

Molecular biology is constantly changing with innovative procedures and products used in recombinant DNA technology.

Fisher's new Biotechnology Division can help you keep pace with the ever-changing market. We can help you consolidate your ordering process. And we provide free shipment, even on the smallest order.

Our Molecular Biology product offerings include:

- **Restriction and modifying enzymes, cloning vectors and in vitro translation systems** from Promega Biotec. Promega offers the most popular and most frequently used restriction and modifying enzymes. Plus, each order includes, at no extra cost, the optimum buffer tested for each enzyme. Promega's rabbit reticulocyte lysate provides high translation activity and low background characteristics.

- **Hybridization transfer membranes** from Micron Separations, Inc. Naturally hydrophilic MAGNAGRAPH and MAGNA Nylon 66 membranes provide stable and permanent binding with superior resolution for Southern, Northern and Dot blotting procedures. There's also MicronSep™ Nitrocellulose for Western blotting.

- **DNA synthesis reagents** from ABN. CED-phosphoramidite chemistries offer high coupling efficiency with short reaction times. Compatible with all DNA synthesizers on the market today. And there are also DNA Synthesis Grade™ Solvent Kits and Reagents, developed to facilitate coupling in manual and automated DNA synthesis.

- **OmniBlot™ processing system**, also from ABN. This integrated system allows fast, simple and safe standardized processing of blotting membranes, electrophoresis gels and other sheeted media used in binding assays. Requires as little as 1mL of probe.

For more information about these fine products, or to learn more about our new Biotechnology Division, please use the reply card; write to us at 711 Forbes Avenue, Pittsburgh, PA 15219; or call 412-562-8543.

(All credit card orders must be signed)

Have the latest progress in molecular biology delivered to your door – for less than the price of your daily newspaper in 1987.

Isn't this the time for you to subscribe? Start now by taking advantage of our trial offer to new subscribers.

☐ Please send me a sample copy.

Honestly, I've never seen the journal before.

Trial subscription offer applies only to orders submitted on this form before 1 July 1987.

Introducing American Scientific Products'

NEW 1987-88
CATALOG

The Most Comprehensive Available Anywhere.

Featuring over 2100 pages of information on a vast array of supplies, equipment, chemicals and other LABORATORY PRODUCTS, the new American Scientific Products Catalog represents the newest and most complete listing of information on laboratory-related products available. Included are products from more than 900 different leading manufacturers as well as American’s private-labeled merchandise.

The colorful catalog includes over 8000 full-color photos, charts and other reference aids that make the catalog extremely easy to use.

This extraordinary reference, like its predecessors, is sure to become an important day-to-day working tool for everyone involved in the specification and purchasing of products for use in science, medicine and industry.

To reserve your personal copy of the new S/P catalog, please contact your local sales representative or your S/P regional distribution center.

Discover Your Future In Biotechnology!

GENETICS INSTITUTE, INC., located in the Fresh Pond area of Cambridge, Mass., is a recognized leader in the field of biotechnology. Our research is committed to the development and application of recombinant DNA technology to human health care, agriculture, and chemicals.

Molecular Biology

We currently have several positions available for highly motivated, talented research associates to take part in our molecular biology research. Qualifications include a B.S./M.S. degree or equivalent in biology and at least two years' experience in any one of the following areas: cDNA cloning, mRNA purification and fractionation, oocyte injection, and in vitro translation. Familiarity with computers desirable.

We offer a stimulating scientific environment in addition to a competitive salary, comprehensive medical coverage, dental and vision care insurance. Qualified candidates should forward their resume, in confidence, to Cindy Molnar.

Until now, when it came to preparative DNA electrophoresis, researchers turned to 366nm longwave transilluminators to reduce photodamage, but sacrificed sensitivity. Today there's a solution.

FOTODYNE presents FOTO/PREP I. The first innovative transilluminator to offer the sensitivity of 300nm midrange UV, with the kind of protection previously provided only by 366nm UV sources.

The key? A unique sensitivity control device. In the analytical mode it provides the nanogram level sensitivity distinguishing all FOTODYNE 300nm DNA transilluminators. Switch to the preparative mode, and a 2000bp band containing less than 10 nanograms of DNA can be visualized for cutting.

More importantly, the gel can be exposed as long as 20 minutes with no detectable photonicking damage!

FOTO/PREP I comes with a replaceable UV transparent protective sheet, so gels can be cut directly on its surface without damaging the UV glass. The molded, UV blocking cover can be raised from 0° to 90° to allow easy access to the gel.

FOTO/PREP I. Available today, only from FOTODYNE. The leader you rely on for innovative advancements in DNA analysis instrumentation.

For more information call or write us. And ask for our free new catalog.

In upcoming issues . . .

Identification of a rat liver nuclear protein that binds to the enhancer core element of three animal viruses
Peter F. Johnson, William H. Landschulz, Barbara J. Graves, and Steven L. McKnight

Species- and tissue-specific expression of human alpha1-antitrypsin in transgenic mice
Gavin D. Kelsey, Susan Povey, Anne E. Bygrave, and Robin H. Lovell-Badge

Control of gene expression in bacteriophage P22 by a small antisense RNA. I. Characterization in vitro of the p$_{sar}$ promoter and the sar RNA transcript
Sha-Mei Liao, Te-hui Wu, Christina H. Chiang, Miriam M. Susskind, and William R. McClure

Control of gene expression in bacteriophage P22 by a small antisense RNA. II. Characterization of mutants defective in repression
Te-hui Wu, Sha-Mei Liao, William R. McClure, and Miriam M. Susskind

Independent subpatterns of sense organs require independent genes of the Achaete-Scute complex in Drosophila larvae
Christine Dambly-Chaudiere and Alain Ghysen

Sigma 32 synthesis can regulate the synthesis of heat shock proteins in Escherichia coli
Alan D. Grossman, David B. Straus, William A. Walter, and Carol A. Gross

Developmental and tissue-specific regulation of beta-tubulin gene expression in the embryo of the sea urchin Strongylocentrotus purpuratus
Patricia Harlow and Martin Nemer

Chromosome-mediated gene transfer using the HPRT region of the human X chromosome as a model
Catrin A. Pritchard and Peter N. Goodfellow

Transabdominal, a dominant mutant of the Bithorax Complex, produces a sexually dimorphic segmental transformation in Drosophila
Susan E. Celniker and E.B. Lewis
The superior *in vitro* mutagenesis system from Amersham

The new Amersham *in vitro* mutagenesis system provides 80-95% efficiency—unlike most other oligonucleotide-directed systems which typically yield a high proportion of non-mutant clones. Mutants can be isolated and verified in one step, so large scale screening is eliminated.

**Convenient:** Specialized vector and host cells are not required. Includes a full set of reagents for ten reactions. **Flexible:** Repeat mutagenesis can be performed without subcloning, and selection of the mutant strand is independent of the nature of the cloned insert. **Reliable:** Like all Amersham products, this system has been rigorously tested to ensure high performance. For complete information, write or call Amersham toll-free.

“Invaluable to all students and researchers in molecular and developmental genetics” *Nature, September 1986*

*Trends in Genetics* is the international monthly review journal devoted to all aspects of genes and developmental biology. Each issue contains reviews of the latest research, written by leading scientists. Discussions and comment on topical ideas and controversies are featured regularly. If you’re interested in the molecular and genetic themes of development *Trends in Genetics* is the essential journal for you. Subscribe today using the order form below.

These are just a few of the exciting reviews we’ll be publishing in the next few months:

- A glimpse at chromosomal order *U. K. Laemmli and S. M. Gasser.*
- Hotspots of homologous recombination in mammalian genomes *M. Steinmetz, Y. Uematsu and K. Fischer Lindahl.*
- Genes and biological rhythms *J. C. Hall and M. Rosbash.*
- Regulatory genes in development *S. G. Waelsch.*
- Plant gene regulation by phytochrome *N-H. Chua and F. Nagy.*
- Attenuation in bacteria *C. Yanofsky.*
- Duchenne muscular dystrophy *A. Monaco and L. Kunkel.*

THE ESSENCE OF PURITY
BORRN OF A PROUD TRADITION

FisherBiotech Reagents and Chemicals
Uncompromising quality for exacting applications in Biotechnology

Reagents, amino acids and buffers for electrophoresis, ultracentrifugation, nucleic acid isolation, DNA sequencing, protein modification and similar applications demanding the assured purity of Fisher's newest class of fine chemicals — FisherBiotech.

From the Fisher Biotechnology Group, suppliers of a growing line of innovative products for molecular biology, cell biology, immunology and fermentation/bioprocessing.

Backed by the Fisher tradition of quality and service, including applications support specialists and this dedicated technical hotline: 1-800-334-1475.

For literature on the new FisherBiotech reagents or any of our other biotechnology products, please use the reply card; write us at 711 Forbes Avenue, Pittsburgh, PA 15219; or phone 412-562-8543.
