The new Eppendorf Micro Centrifuge.

With 50% higher capacity, variable speed, quieter operation, and quick-release rotor.

Brand new and turning 18.

Higher capacity...plus.
The new 18-place Model 5415 Micro Centrifuge gives you important operating advantages—with unique Eppendorf quality.

Versatile in use.
Model 5415 has a variable-speed motor that reaches a maximum of 14,000 rpm with an RCF of 16,000 x g; a 30-minute timer; and a momentary button for short spins. It accepts 1.5 mL, 500 µL, 400 µL, and 250 µL Eppendorf Microcentrifuge Tubes and blood collection microtubes, such as B-D Microtainer® Tubes.

New rotor design.
The enclosed rotor design reduces air turbulence for quieter operation. And the new quick-release feature lets you transport the rotor with tubes—especially convenient when the centrifuge is run in a cold room.

Safe and rugged.
The Eppendorf 5415 Micro Centrifuge is UL listed for safety. It's so rugged that an accidentally unbalanced load won't cause excessive vibration or motor damage.

*Microtainer® Tubes is a registered trademark of Becton Dickinson and Company
EXTEND THE LIMITS OF SEQUENCING WITH . . .

SEQUENASE™

- REDUCES GEL BACKGROUND
- GIVES UNIFORM BAND INTENSITIES
- ELIMINATES COMPRESSIONS USING dITP
- RESOLVES 500, 600 OR MORE BASES
- EASY TO USE

*Sequenase™ is a novel T7 DNA polymerase specifically engineered for DNA sequencing. Sequenase™ has been overproduced and purified. It is highly processive; it will polymerize thousands of nucleotides uninterrupted. It is not impeded by template secondary structure. It has no exonuclease activity, and efficiently incorporates nucleotide analogs (thio-dATP, dideoxyNTPs, dITP, etc.). Together, these properties make Sequenase™ ideal for determining the sequence of even "difficult" DNAs, and allow reading of sequence information well beyond the point where traditional sequencing enzymes fail.

Sequenase™ is used in combination with familiar M13 vectors and primers and either 35S or 32P labeled dATP. The products can be run on any standard sequencing gel apparatus with excellent results. However, it is recommended that very long or gradient gels be used for reading the maximum possible number of nucleotides. Specially prepared high purity reagents are included to insure optimal results.

The convenient Sequenase™ Kit, Product No. 70700
- Sufficient for 100 sequences
- Buffer
- Pre-mixed nucleotides including dITP
- Universal primer
- Control DNA
- Stop solution
- Sequenase™ DNA Polymerase
- Complete protocol booklet

*Patent Pending
“Invaluable to all students and researchers in molecular and developmental genetics” *

*Trends in Genetics* is the international monthly review journal devoted to all aspects of genes and developmental biology. Each issue contains reviews of the latest research, written by leading scientists. Discussions and comment on topical ideas and controversies are featured regularly. If you’re interested in the molecular and genetic themes of development *Trends in Genetics* is the essential journal for you. Subscribe today using the order form below.

These are just a few of the exciting reviews we’ll be publishing in the next few months:

- A glimpse at chromosomal order U. K. Laemmli and S. M. Gasser.
- Hotspots of homologous recombination in mammalian genomes M. Steinmetz, Y. Uematsu and K. Fischer Lindahl.
- Genes and biological rhythms J. C. Hall and M. Rosbash.
- Regulatory genes in development S. G. Waelsch.
- Attenuation in bacteria C. Yanofsky.
- Duchenne muscular dystrophy A. Monaco and L. Kunkel.

In recent years, the field of developmental genetics has expanded to include research in molecular genetics. In order to accommodate the resulting growth in paper flow, Developmental Genetics will increase in frequency from a quarterly to a bimonthly publication schedule. Unique in its dual coverage of molecular and developmental genetics, the journal provides a forum for research on all organisms—including prokaryotes, plants, insects, worms, and mammals.

Developmental Genetics publishes original papers pertaining to gene regulation and expression during development and differentiation in biological systems. Emphasis is placed on papers dealing with the molecular, biochemical, and physiological aspects of gene action and regulation during development. The journal welcomes full-length articles reporting on original experimental research on gene action, interaction, and regulation as related to developmental processes; interactions between genotypes in sexual and para-sexual hybrids with regard to developmental processes; and interactions between genotypes and developmental stimuli, including normal and experimentally manipulated systems. Book reviews are a regular feature of the journal and timely reviews may be submitted at the invitation of the editor.

Manuscripts for publication should be sent to the editor: Dr. John Scandalios, Developmental Genetics, Department of Genetics, Box 7614, North Carolina State University, Raleigh, North Carolina 27695-7614.

Indexed by: BIOSIS-Data Base, Cambridge Scientific Abstracts, Chemical Abstracts, Current Contents/Life Sciences-Science Citation Index, Excerpta Medica, ISI-Soviet Union. ISSN: 0192-253X; Coden:OGNTDW.

Selected Articles From Developmental Genetics

Intron-Delay and the Precision of Expression of Homoeotic Gene Products in Drosophila, D. Gubb

Genetic Control of Cell Interactions in Chimeras, Clement L. Markert

Decreased Methylation of the Major Mouse Long Interspersed Repeated DNA During Aging and in Myeloma Cells, Laura Mays-Hoopes, Wei Chao, Henry C. Butcher, and Ru Chih C. Huang

Regulation of Late Gene Expression in a Temperature-Sensitive Cohesion-Defective Mutant of Dictyostelium discoideum, C.L. Saxe and Richard A. Firtel

A Temperature-Sensitive Mutant Affecting the Process of Chorion Gene Amplification in Drosophila melanogaster, Katia Komitopoulou, Sophie Kouyanou, and Fotis C. Kafatos

Changes in Plant Gene Expression During Stress, Gail L. Matters and John G. Scandalios

Introducing American Scientific Products' NEW 1987-88 CATALOG

The Most Comprehensive Available Anywhere.

Featuring over 2100 pages of information on a vast array of supplies, equipment, chemicals and other LABORATORY PRODUCTS, the new American Scientific Products Catalog represents the newest and most complete listing of information on laboratory-related products available. Included are products from more than 900 different leading manufacturers as well as American's private-labeled merchandise.

The colorful catalog includes over 8000 full-color photos, charts and other reference aids that make the catalog extremely easy to use.

This extraordinary reference, like its predecessors, is sure to become an important day-to-day working tool for everyone involved in the specification and purchasing of products for use in science, medicine and industry.

To reserve your personal copy of the new S/P catalog, please contact your local sales representative or your S/P regional distribution center.

The Fifth Conference on Modern Approaches to Vaccines

MODERN APPROACHES TO NEW VACCINES INCLUDING PREVENTION OF AIDS

September 9-13, 1987

Organized by:
Fred Brown, Wellcome Biotechnology Ltd
Robert Chanock, National Institutes of Health
Harold Ginsberg, Columbia University
Richard Lerner, Scripps Clinic & Research Foundation

The meeting will provide:
1. comprehensive updates on strategies for development of vaccines against viral, bacterial, and parasitic diseases;
2. discussions on AIDS, presenting latest research on the AIDS retrovirus and prospects for developing a vaccine;
3. discussions on the latest research on structural/chemical aspects of antigen-antibody union and antigen presentation and processing.

The abstract deadline is JULY 1.
Requests for registration and/or abstract materials should be forwarded to:
Meetings Coordinator
Cold Spring Harbor Laboratory
P.O. Box 100
Cold Spring Harbor, NY 11724
(516) 367-8346
