The new Eppendorf Micro Centrifuge.

With 50% higher capacity, variable speed, quieter operation, and quick-release rotor.

Brand new and turning 18.

Higher capacity...plus.
The new 18-place Model 5415 Micro Centrifuge gives you important operating advantages—with unique Eppendorf quality.

Versatile in use.
Model 5415 has a variable-speed motor that reaches a maximum of 14,000 rpm with an RCF of 16,000 x g; a 30-minute timer; and a momentary button for short spins. It accepts 1.5 mL, 500 µL, 400 µL, and 250 µL Eppendorf Microcentrifuge Tubes and blood collection microtubes, such as B-D Microtainer® Tubes.

New rotor design.
The enclosed rotor design reduces air turbulence for quieter operation. And the new quick-release feature lets you transport the rotor with tubes—especially convenient when the centrifuge is run in a cold room.

Safe and rugged.
The Eppendorf 5415 Micro Centrifuge is UL listed for safety. It's so rugged that an accidentally unbalanced load won't cause excessive vibration or motor damage.

Brinkmann INSTRUMENTS, INC.
Discover Tran\textsuperscript{35S}-Label™

A New Metabolic Labeling Reagent

Tran\textsuperscript{35S}-label has been developed as an alternative form of L-Methionine, \textsuperscript{[35S]} by ICN Radiochemicals, a division of ICN Biomedicals, Inc. Tran\textsuperscript{35S}-label was field tested in major laboratories and proven to be an equivalent substitute for purified L-Methionine, \textsuperscript{[35S]} when used to label mammalian cells in culture and proteins \textit{in vivo}.

Tran\textsuperscript{35S}-label (L-Methionine, \textsuperscript{[35S]}; L-Cysteine, \textsuperscript{[35S]}) is derived from \textsuperscript{35S} E. coli hydrolysate, at a specific activity > 1000 Ci/mmol.

Available as an aqueous solution containing 10mM 2-mercaptoethanol and packaged in a multi-purpose (resealable cap) vial at ~10mCi L-Methionine, \textsuperscript{[35S]}/ml.

Catalog No. 51006.
ANNOUNCING 1988 UCLA SYMPOSIA RELATED TO GENES & DEVELOPMENT

(C) GROWTH FACTORS AND THEIR RECEPTORS: GENETIC CONTROL AND RATIONAL APPLICATION
   Sponsored by: Abbott Laboratories - Cetus Corporation - Genentech, Inc. - Smith Kline & French
   Organizers: Russell Ross, Antony Burgess and Tony Hunter
   January 24-30, 1988 • Keystone, Colorado
   ABSTRACT DEADLINE: October 2, 1987

(D) GROWTH INHIBITORY AND CYTOTOXIC POLYPEPTIDES
   Sponsored by: Genentech, Inc. - Smith Kline & French - Triton Biosciences, Inc.
   Organizers: Harold Moses, Peter Lengyel and Charles Siles
   January 24-30, 1988 • Keystone, Colorado
   ABSTRACT DEADLINE: October 2, 1987

(H) GENE TRANSFER AND GENE THERAPY
   Sponsored by: E.I. du Pont de Nemours
   February 6-12, 1988 • Tamarron, Colorado
   ABSTRACT DEADLINE: October 23, 1987

(L) THE MOLECULAR BASIS OF PLANT DEVELOPMENT
   Sponsored by: E.I. du Pont de Nemours
   Organizer: Robert Goldberg
   March 26-April 2, 1988 • Steamboat Springs, Colorado
   ABSTRACT DEADLINE: November 13, 1987

(P) STRESS-INDUCED PROTEINS
   Sponsored by: Hoffmann-La Roche, Inc. - The Director's Sponsors Fund
   Organizers: Mary Lou Pardue, James Feramisco and Susan Lindquist
   April 10-16, 1988 • Keystone, Colorado
   ABSTRACT DEADLINE: November 25, 1987

(M) CELLULAR AND MOLECULAR BIOLOGY OF MUSCLE DEVELOPMENT
   Sponsored by: The Director's Sponsors Fund
   Organizers: Frank Stockdale and Laurence Kedes
   April 3-10, 1988 • Steamboat Springs, Colorado
   ABSTRACT DEADLINE: November 13, 1987

(N) MOLECULAR BIOLOGY OF RNA
   Sponsored by: The Director's Sponsors Fund
   Organizer: Thomas Cech
   April 4-10, 1988 • Keystone, Colorado
   ABSTRACT DEADLINE: November 25, 1987

(O) DNA-PROTEIN INTERACTIONS IN TRANSCRIPTION
   Sponsored by: The Director's Sponsors Fund
   Organizer: Jack Grilli
   April 4-10, 1988 • Keystone, Colorado
   ABSTRACT DEADLINE: November 25, 1987

(S) CELL ACTIVATION AND SIGNAL INITIATION: RECEPTOR AND PHOSPHOLIPASE CONTROL OF INOSITOL PHOSPHATE, PAF AND EICOSANOID PRODUCTION
   Sponsored by: Eli Lilly Research Laboratories
   Organizers: Edward Dennis, Michael Berridge and Tony Hunter
   April 17-23, 1988 • Keystone, Colorado
   ABSTRACT DEADLINE: January 4, 1988

(Detach here) (C,D,H,I,J,L,M,N,O,P,S)

INFORMATION REQUEST FORM

Please send me program and application information on the 1988 UCLA Symposia on Molecular & Cellular Biology.

FROM GENES TO CLONES: Introduction to Gene Technology
E. L. Winnacker
This textbook on gene technology offers for the first time a unified approach to the subject and summarizes the concepts and strategies behind the art of gene cloning.

The author describes the unit operations of gene technology and provides practical guidance on the isolation and characterization of DNA and genes, the development of cloning vectors, and the characterization of recombinant DNA molecules. He also discusses in great detail the development and practical applications of plasmids, bacteriophages, cosmids, phasmids, and eukaryotic viruses as cloning vehicles, along with the respective hosts, i.e., prokaryotes, streptomyces, yeasts, plant cells, and eukaryotes. Each chapter contains an extensive list of references; the appendix includes information about frequently used host strains, restriction enzymes, restriction maps, sequence data, and the 1986 NIH Guidelines for Research Involving Recombinant DNA Molecules. A very detailed index and more than 400 figures allow the book to be used as a reference manual.

METHODS OF ENZYMATIC ANALYSIS
Third English Edition in 12 Volumes
Vol. X: Antigens and Antibodies 1
H. U. Bergmeyer, J. Bergmeyer, and M. Grasst
These volumes provide working instructions for the determination of antigens (proteins, viruses, and microorganisms with antigenic properties) and antibodies. They present for the first time a collection of enzyme-immunoassay techniques in the format of working instructions to promote and facilitate the diagnosis of viral, allergic, and autoimmune diseases.

ISBN 0-89573-241-6 Sub Price $110.00

Vol. XI: Antigens and Antibodies 2

Now available . . .

CUMULATED SUBJECT INDEX — Methods of Enzymatic Analysis, Third English Edition
H. U. Bergmeyer, J. Bergmeyer, and M. Grasst
A comprehensive index to the complete twelve volumes of Methods of Enzymatic Analysis.

90 pp. ISBN 0-89573-243-2 Regular Price $61.00
ISBN 0-89573-658-6 Sub Price $47.00

THE ART OF SCIENTIFIC WRITING: From Student Reports to Professional Publications in Chemistry and Related Fields
H. F. Ebel, C. Bliefert, and W. E. Russey
Three scientists from both sides of the Atlantic Ocean summarize their years of experience as authors, teachers, and editors for all those who want to know about scientific writing and publishing.

ELECTROPHORESIS '86
M. J. Dunn
72 papers and 72 poster abstracts reflect the latest trends and developments in electrophoretic techniques and their applications. Articles on the analytical electrophoresis of proteins and on two-dimensional electrophoresis account for more than half of the contributions.

METALLOPROTEINS
Pauline M. Harrison
The essays collected here seek to arrive at an understanding of how metalloprotein molecules work and the relationship of their functions to their own structures and to the function and structures of other biomolecules.

Part one encompasses both molecules for which three-dimensional structures are already available and complexes for which structural information is lacking or incomplete. It deals primarily with transition metals. Part two brings together six classes of protein to illustrate a variety of important physiological processes in which metals are involved in association with protein.

Some activities illustrated are enzyme catalysis, triggering, and oxygen transport.

Topics in Molecular and Structural Biology 3
Part 1: Metal Proteins with Redox Roles
Part 2: Metal Proteins with Non-Redox Roles

GNOMIC — A Dictionary of Genetic Codes
E. N. Trifonov and V. Brendel
1987 272 pp. ISBN 0-89573-658-6 $89.95
INFORMATION FOR CONTRIBUTORS

Aims and Scope

Genes and Development reports important advances in the understanding of the molecular genetics of eukaryotes, prokaryotes, and viruses. All aspects of gene expression and regulation are covered, with a special emphasis on the elucidation of normal and abnormal development and differentiation as revealed by the techniques of molecular genetics. In the context of this special emphasis, the editorial policy of the journal fully recognizes that many types of genetic research will help elucidate the relationship between genotype and phenotype. Thus the scope of Genes and Development is much broader than “developmental genetics” as conventionally defined. The journal welcomes high-quality research papers concerning any organism or virus that address questions concerning the regulation and expression of genes.

The scientific excellence of the journal will be established with the active support of its international editorial board. Rapid publication of papers with a general interest will be a key feature of Genes and Development. The average reviewing time for papers is three weeks and publication time from acceptance of manuscript is between two and three months. Genes and Development is published by Cold Spring Harbor Laboratory and the Genetical Society of Great Britain, both independent nonprofit institutions.

Submission of Papers

The journal accepts papers which present original research that has not previously been published. Submission to the Journal implies that a paper is not currently being considered for another journal or book. It is also understood that researchers who submit papers to this journal will be prepared to make available to qualified academic researchers materials needed to duplicate their research results (probes, plasmids, clones, sequences, and the like).

Contributors should submit their papers to:
Judy Cuddihy, Managing Editor
Cold Spring Harbor Laboratory
P.O. Box 100
Cold Spring Harbor, New York 11724, USA
Phone (516) 367-8492

or

Grahame Bulfield, Editor
AFRC Institute of Animal Physiology & Genetics Research
Edinburgh Research Station
Roslin, Midlothian EH25 9PS, UK
Phone (031) 440-2726 or 0977

All papers will be reviewed, and all communications regarding submitted papers should be directed to the Executive Editors. After acceptance, questions regarding papers should be directed to Judy Cuddihy, Managing Editor, at Cold Spring Harbor Laboratory (516-367-8438).

Manuscript Preparation

1. General. There will be no set limits on the length of the papers published in Genes and Development. Short papers will be welcomed if they present complete, rather than preliminary, data. Papers of 10 or more printed pages will be accepted if the editors and referees consider that the information requires extensive explanation and discussion. The entire paper (including tables, figure legends, references, footnotes) should be typed double-spaced on standard-sized European or American bond paper with 1-in (2.5 cm) margins on all four sides. Computer printouts should be of letter quality. Each page should be labeled with the first author’s name and a page number. Five copies should be submitted; at least four of these copies should have original art. A cover letter should include: (a) name, address, and telephone number of author responsible for correspondence regarding the manuscript; (b) statement that the manuscript has been seen and approved by all listed authors; (c) any specific requirements for reproduction of art; and (d) status of permissions needed for reprinted tables and figures.

2. Submitting Papers on Computer Discs. We can accept papers on 5¼-inch floppy discs or 3¼-inch Macintosh discs in over 150 CPM formats and in IBM PC, AT, and XT (1.2 meg or 360K floppy), Apple DOS, or compatible formats. Please supply the manuscript on the disc as a “text” file, if possible. If a word-processing file is being sent, do not use any underscoring, italic, or boldface; spell out special characters {Greek, math}; use two carriage returns at the end of each paragraph, subheads, and list items. Indicate on the disc: computer brand name, whether the disc contains a text or word-processing file {name of software}, and the disc format. Four hardcopy versions should also be submitted for use by referees and editors.

4. Form. The following order is preferred: Title page, Abstract, Introduction, Results/Discussion, Conclusions, Methods, Acknowledgments, References, Tables, Figure legends. The Title page should include: (a) title; (b) all authors’ full names; (c) all affiliations clearly indicated; (d) a shortened version of the title for use as a running head (maximum 45 characters), and (e) key words {up to 6} for use in indexing. The Abstract should be about 200 words long and should summarize the aim of the report, the methodological approach, and the significance of the results. Methods
will appear at the end of the paper and should be detailed enough to allow any qualified researcher to duplicate the results.

5. Figures and Legends. Figures should be supplied as high-quality glossy prints. Half-tones should be high-contrast, particularly in the case of gels, for the best reproduction. If accurate reproduction is crucial, please describe your requirements in your cover letter so that the best possible reproduction method can be selected. Line drawings, graphs, charts, and chemical formulae should be professionally prepared and labeled. Sequences should be submitted as camera-ready copy—either a glossy print of the printout or the printout itself if it is of letter quality.

The back of each figure should be labeled with the first author’s name, figure number, and an indication of “top.” The figures should be numbered consecutively in the order to which they are referred in the text. The size of the figures will be adjusted to fit the Journal format, therefore please try to keep labels, symbols, and other call-out devices in proportion to the figure size and detail.

Figure legends should be brief and should not contain methods. Symbols indicated in the figure should be identified in the legend text. If figures are reprinted from another source, permission to reprint is required.

6. Tables. Tabular data should be presented concisely and logically. Tables should be numbered consecutively according to the order cited in the text and each should have a title. Use only horizontal rules and make sure column headings are unambiguous in indicating columns to which they refer. Table legends and footnotes should be included where needed. If tables are reprinted from another source, permission to reprint is required.

7. References. References are name/date citations in text; please do not cite by number. Use et al. for more than two authors in text citation, and if more than one paper is cited, place in chronological order. Undated citations (unpublished, in preparation, personal communication) should include first initials and last names of authors.

The reference list should be alphabetized according to number of authors and then chronologically with the earliest year first. Bibliographic information should be supplied in the following order. For journal articles: Author(s), year, article title, journal title, volume, inclusive page numbers. For books: Author(s), year, chapter title, book title, editors’ names, volume, inclusive page numbers, publisher, city of publication.

8. Proofs. Proofs are considered the final form of the paper and correction can be made only in the case of factual errors. If additional information must be added at this stage, it should be in the form of “Note added in proof;” subject to the approval of the reviewing editors. Excessive changes made in proofs (more than 15% of the typesetting cost for the paper) will be charged back to the author. To ensure rapid publication proofs should be returned within 48 hours of receipt.

9. Reprints. A reprint order form will be included with the proofs.

10. Copyright. In order for the Journal to safeguard the author’s rights with regard to the author’s published work and our own rights of ownership of the Journal as a whole, a formal transfer of copyright must be executed by the author of each article. This transfer does not lessen in any way the author’s rights to publish this work in whole or in part. Further details are available in the Copyright Transfer Agreement included with proofs.

In upcoming issues of Genes & Development:

The mother–daughter mating type switching asymmetry of budding yeast is not conferred by the segregation of parental HO gene DNA strands
Amar J.S. Klar

Cell- and promoter-specific activation of transcription by DNA replication
David S. Grass, Douglas Read, E. Diann Lewis, and James L. Manley

Expression and assembly of a human neurofilament protein in transgenic mice provide a novel neuronal marking system
Jean-Pierre Julien, Irene Tretjakoff, Lucille Beaudet, and Alan Peterson

Alternative processing during development of a macronuclear chromosome family in Oxytricha fallax
Glenn Herrick, Deborah Hunter, Kevin Williams, and Kenneth Kotter

Spec3: embryonic expression of a sea urchin gene whose product is involved in ectodermal ciliogenesis
Elizabeth D. Eldon, Lynne M. Angerer, Robert C. Angerer, and William H. Klein

Deletion analysis of the achaete-scute locus of Drosophila melanogaster
Mar Ruiz-Gomez and Juan Modolell

Electrophoretic morphological and antibiotic deficiencies result from mutations in a gene encoding a tRNA-like product in Streptomyces coelicolor A3(2)
Elizabeth J. Lawlor, Howard A. Baylis, and Keith F. Chater
In upcoming issues of *Genes & Development*:
