A statistics package that's easy to use? You've heard it all before, right? Then you saw the five volume library you needed to memorize before you could get any work done. While other packages make lofty claims about ease of use, StatView actually delivers. Since 1985, StatView has been the leading statistics package on the Macintosh. The goal of StatView is and always has been to provide researchers with a software tool that makes data analysis effortless. Unlike our competitors, StatView began as a graphics-based application. Its not a command line, mainframe-behemoth ported to Windows. StatView’s celebrated point and click interface lets you create and edit your analyses on the fly. Add new variables, change your data, edit analyses, enhance graphs and tables all by pointing and clicking. No commands to memorize. Save your work at any time, re-open it and pick up right where you left off. And never lose the links to your data. Try that with any other statistics package! But don't just take our word for it. StatView has received more awards from the Macintosh press than any other statistics package available — a six-time Macworld World Class award winner, 1996 World Class finalist, MacUser Editor's Choice award winner and 1995 Editor's Choice finalist. THINK ITS ALL TOO GOOD TO BE TRUE? FIND OUT WHAT YOU'VE BEEN MISSING. CALL 1-800-666-STAT FOR MORE INFORMATION AND A FREE DEMO DISK!!

StatView is a 32-bit Windows 95 ready application. StatView also runs with Windows 3.1, Windows NT and is available for Macintosh and Power Macs.

Research papers
The axis-inducing activity, stability, and subcellular distribution of β-catenin is regulated in Xenopus embryos by glycogen synthase kinase 3
Cynthia Yost, Monica Torres, Jeffrey R. Miller, Eugene Huang, David Kimelman, and Randall T. Moon

Protein kinase C-ζ reverts v-raf transformation of NIH-3T3 cells

Essential role of stromal mesenchyme in kidney morphogenesis revealed by targeted disruption of Winged Helix transcription factor BF-2
Victor Hatini, Sung O. Huh, Doris Herzlinger, Vera C. Soares, and Eseng Lai

Activator-dependent regulation of transcriptional pausing on nucleosomal templates
Steven A. Brown, Anthony N. Imbalzano, and Robert E. Kingston

Mammalian p50Cdc37 is a protein kinase-targeting subunit of Hsp90 that binds and stabilizes Cdk4
Lilia Stepanova, Xiaohong Leng, Susan B. Parker, and J. Wade Harper

Xe-p9, a Xenopus Suc1/Cks homolog, has multiple essential roles in cell cycle control
Debabrata Patra and William G. Dunphy

Activation of S-phase-promoting CDKs in late G1 defines a “point of no return” after which Cdc6 synthesis cannot promote DNA replication in yeast
Simonetta Piatti, Thomas Böhm, Julie H. Cocker, John F.X. Diffley, and Kim Nasmyth

Caulobacter Lon protease has a critical role in cell-cycle control of DNA methylation
Rachel Wright, Craig Stephens, Gary Zweiger, Lucy Shapiro, and M.R.K. Alley

(continued)
The SL1 trans-spliced leader RNA performs an essential embryonic function in Caenorhabditis elegans that can also be supplied by SL2 RNA
Kimberly C. Ferguson, Paul J. Heid, and Joel H. Rothman

Selective translation initiation by ribosome jumping in adenovirus-infected and heat-shocked cells
Andrew Yueh and Robert J. Schneider
