Research papers

Targeted in vivo expression of the cyclin-dependent kinase inhibitor p21 halts hepatocyte cell-cycle progression, postnatal liver development, and regeneration
Hua Wu, Michael Wade, Leonard Krall, Joe Grisham, Yue Xiong, and Terry Van Dyke

A novel, mitogen-activated nuclear kinase is related to a Drosophila developmental regulator
Gerald V. Denis and Michael R. Green

Protein phosphatase 2A positively and negatively regulates Ras1-mediated photoreceptor development in Drosophila
David A. Wassarman, Noah M. Solomon, Henry C. Chang, Felix D. Karim, Marc Therrien, and Gerald M. Rubin

Mammalian RAFT1 kinase domain provides rapamycin-sensitive TOR function in yeast
Clara M. Alarcon, Maria E. Cardenas, and Joseph Heitman

Specificity of single LIM motifs in targeting and LIM/LIM interactions in situ
Silvia Arber and Pico Caroni

Conversation of the hedgehog/patched signaling pathway from flies to mice: induction of a mouse patched gene by Hedgehog
Lisa V. Goodrich, Ronald L. Johnson, Ljiljana Milenkovic, Jill A. McMahon, and Matthew P. Scott

Analysis of the vestigial tail mutation demonstrates that Wnt-3a gene dosage regulates mouse axial development
Tamara L. Greco, Shinji Takada, Matthew M. Newhouse, Jill A. McMahon, Andrew P. McMahon, and Sally A. Camper

Interaction between the U1 snRNP–A protein and the 160-kD subunit of cleavage-polyadenylation specificity factor increases polyadenylation efficiency in vitro
Carol S. Lutz, Kanneganti G.K. Murthy, Nancy Schek, J. Patrick O'Connor, James L. Manley, and James C. Alwine

U1 snRNA promotes the selection of nearby 5′ splice sites by U6 snRNA in mammalian cells
Dong-Youn Hwang and Justus B. Cohen

Intron mobility in phage T4 occurs in the context of recombination-dependent DNA replication by way of multiple pathways
John E. Mueller, Jonathan Clyman, Yi-Jiun Huang, Monica M. Parker, and Marlene Belfort

Erratum

Cover  p21 arrests cell cycle in transgenic mice. [Inset, left] Normal mitosis after partial hepatectomy, [Inset, right, and background] p21 expressing liver which halts cell division and produces extremely large nuclei. [For details, see Wu et al., p. 245.]
