Research papers

Protein kinase A is a common negative regulator of Hedgehog signaling in the vertebrate embryo
Matthias Hammerschmidt, Mark J. Bitgood, and Andrew P. McMahon

Zygotic Drosophila E-cadherin expression is required for processes of dynamic epithelial cell rearrangement in the Drosophila embryo
Tadashi Uemura, Hiroki Oda, Rachel Kraut, Shigeo Hayashi, Youhei Kataoka, and Masatoshi Takeichi

Shotgun encodes Drosophila E-cadherin and is preferentially required during cell rearrangement in the neurectoderm and other morphogenetically active epithelia
Ulrich Tepass, Eileen Gruszynski-DeFeo, Thomas A. Haag, Lili Omatyar, Tibor Török, and Volker Hartenstein

Yeast histone H3 and H4 amino termini are important for nucleosome assembly in vivo and in vitro: redundant and position-independent functions in assembly but not in gene regulation
Xuefeng Ling, Troy A.A. Harkness, Michael C. Schultz, Grace Fisher-Adams, and Michael Grunstein

Short-range transcriptional repressors mediate both quenching and direct repression within complex loci in Drosophila
Susan Gray and Michael Levine

Drosophila TFIID binds to a conserved downstream basal promoter element that is present in many TATA-box-deficient promoters
Thomas W. Burke and James T. Kadonaga

Alternative outcomes in assembly of promoter complexes: the roles of TBP and a flexible linker in placing TFIIB on tRNA genes
Cláudio A.P. Joazeiro, George A. Kassavetis, and E. Peter Geiduschek

Intercellular C-signaling in Myxococcus xanthus involves a branched signal transduction pathway
Lotte Søgaard-Andersen, Frank J. Slack, Harvey Kimsey, and Dale Kaiser

(continued)
Transposase is the only nematode protein required for in vitro transposition of Tcl
Jan C. Vos, Ivo De Baere, and Ronald H.A. Plasterk

Determinants of selectivity in Xer site-specific recombination
Garry Blakely and David Sherratt
