Zeiss discovered fluorescence microscopy back in 1904. Today we offer you more ways to reveal its power.

After almost a century of experience in fluorescence and epifluorescence microscopy, Carl Zeiss maintains its leadership with innovation, unsurpassed optics, and microscope configurations for every application...and every budget. For qualitative or quantitative analysis. From basic techniques to the most challenging multi-fluorescence applications, Carl Zeiss has the systems, accessories and expertise to give you the finest images possible.

A large selection of famous Zeiss ICS optics are optimized for specific fluorescence applications to give exceptional light transmission through the widest spectral ranges. When combined with the short beam paths of Zeiss microscopes, the results are images of unsurpassed brilliance and contrast, even at low light levels.

The Attofluor™ RatioVision Analyzer for digital ratio imaging and photometry now has the RatioArc excitor for over 1000 ratios per second. And the Inverted Confocal Laser Scan Microscope LSM 410 with three simultaneous fluorescence channels provides researchers with outstanding versatility and multi-user capabilities.

Contact your Zeiss technical representative today for a free fluorescence microscopy consultation. For literature and the name of your representative, call (800) 233-2343 or fax (914) 681-7446.

Research papers

Caenorhabditis elegans LET-502 is related to Rho-binding kinases and human myotonic
dystrophy kinase and interacts genetically with a homolog of the regulatory subunit of smooth
muscle myosin phosphatase to affect cell shape
Andreas Wissmann, Julia Ingles, James D. McGhee, and Paul E. Mains

An Egalitarian–BicaudalD complex is essential for oocyte specification and axis determination
in Drosophila
Jennifer M. Mach and Ruth Lehmann

Two domains of MyoD mediate transcriptional activation of genes in repressive chromatin: a
mechanism for lineage determination in myogenesis
Anthony N. Gerber, Todd R. Klesert, Donald A. Bergstrom, and Stephen J. Tapscott

A role for bone morphogenetic proteins in the induction of cardiac myogenesis
Thomas M. Schultheiss, John B.E. Burch, and Andrew B. Lassar

Activation of the nuclear factor-κB by Rho, CDC42, and Rac-1 proteins
Rosario Perona, Silvia Montaner, Luisa Saniger, Isabel Sánchez-Pérez, Rodrigo Bravo, and
Juan Carlos Lacal

Essential functions of Pax5 (BSAP) in pro-B cell development: difference between fetal and
adult B lymphopoiesis and reduced V-to-DJ recombination at the IgH locus
Stephen L. Nutt, Pavel Urbánek, Antonius Rolink, and Meinrad Busslinger

The subcellular locations of p15ink4b and p27kip1 coordinate their inhibitory interactions with
cdk4 and cdk2
Inga Reynisdóttir and Joan Massagué

Cdc2 tyrosine phosphorylation is required for the DNA damage checkpoint in fission yeast
Nicholas Rhind, Beth Furnari, and Paul Russell

(continued)
Stnl, a new *Saccharomyces cerevisiae* protein, is implicated in telomere size regulation in association with Cdc13
Nathalie Grandin, Steven I. Reed, and Michel Charbonneau

Telomerase RNA mutations in *Saccharomyces cerevisiae* alter telomerase action and reveal nonprocessivity in vivo and in vitro
John Prescott and Elizabeth H. Blackburn
