Review
Host responses to pathogenic *Salmonella* infection
Bradley D. Jones

Research papers
Tpl-2 is an oncogenic kinase that is activated by carboxy-terminal truncation
Jeffrey D. Ceci, Christos P. Patriotis, Christos Tsatsanis, Antonios M. Makris, Robert Kovatch, Deborah A. Swing, Nancy A. Jenkins, Philip N. Tsichlis, and Neal G. Copeland

The PI 3-kinase/Akt signaling pathway delivers an anti-apoptotic signal
Scott G. Kennedy, Andrew J. Wagner, Suzanne D. Conzen, Joaquín Jordán, Alfonso Bellacosa, Philip N. Tsichlis, and Nissim Hay

Targeted expression of MDM2 uncouples S phase from mitosis and inhibits mammary gland development independent of p53
Karen Lundgren, Roberto Montes de Oca Luna, Yvette Boddie McNeill, Elena P. Emerick, Ben Spencer, Cynthia Rahn Barfield, Guillermima Lozano, Michael P. Rosenberg, and Cathy A. Finlay

A single-point mutation in HCF causes temperature-sensitive cell-cycle arrest and disrupts VP16 function
Hiroshige Goto, Seiichi Motomura, Angus C. Wilson, Richard N. Freiman, Yusaku Nakabeppu, Kohtaro Fukushima, Masatoshi Fujishima, Winship Herr, and Takeharu Nishimoto

Analysis of a cAMP-responsive activator reveals a two-component mechanism for transcriptional induction via signal-dependent factors
Toshihiro Nakajima, Chiharu Uchida, Stephen F. Anderson, Jeffrey D. Parvin, and Marc Montminy

A novel Raplp-interacting factor, Rif2p, cooperates with Riflp to regulate telomere length in *Saccharomyces cerevisiae*
David Wotton and David Shore

Involvement of the carboxyl terminus of vertebrate poly(A) polymerase in U1A autoregulation and in the coupling of splicing and polyadenylation
Samuel I. Gunderson, Stéphan Vagner, Maria Polycarpou-Schwarz, and Iain W. Mattaj

Multilineage gene expression precedes commitment in the hemopoietic system
Ming Hu, Diane Krause, Mel Greaves, Saul Sharkis, Michael Dexter, Clare Heyworth, and Tariq Enver

(continued)
The bZIP transcription factor LCR-F1 is essential for mesoderm formation in mouse development
Susan C. Farmer, Chiao-Wang Sun, Glenn E. Winnier, Brigid L.M. Hogan, and Tim M. Townes

The ROOT HAIR DEFECTIVE3 gene encodes an evolutionarily conserved protein with GTP-binding motifs and is required for regulated cell enlargement in Arabidopsis
Haiyang Wang, Susan K. Lockwood, Mark F. Hoeltzel, and John W. Schiefelbein

Product News

Cover  Mutant plant tissue (Arabidopsis thaliana) transformed with a novel cell expansion gene restores normal cell morphogenesis, including the normal formation of long tubular-shaped root hair cells. Shown is tissue from the thd3-3 mutant transformed with a cosmid clone containing DNA encompassing the entire RHD3 gene. [For details, see Wang et al., p. 799.]
