INFORMATION FOR CONTRIBUTORS

Aims and Scope

Genes & Development welcomes high-quality research papers that address questions concerning the regulation and expression of genes of any organism or virus. Publication time from acceptance of manuscript is between two and three months. For papers accepted subject to revision, only one revised version will be considered; it must be submitted within 3 months of the provisional acceptance.

Submission of Papers

The journal accepts papers which present original research that has not previously been published. Submission to the journal implies that a paper is not currently being considered for another journal or book. It is also understood that researchers who submit papers to this journal are prepared to make available to qualified academic researchers materials needed to duplicate their research results (probes, plasmids, clones, sequences, and the like).

Contributors from North and South America, and Australia should submit their papers to:

Judy Cuddihy, Managing Editor
Cold Spring Harbor Laboratory
P.O. Box 100
Cold Spring Harbor, New York 11724, USA
Phone (516) 367-8492

Contributors from Europe, Asia, and Africa should submit their papers to:

Graham Bullfield, Editor
AFRC Institute of Animal Physiology & Genetics Research
Edinburgh Research Station
Roslin, Midlothian EH25 9PS, UK
Phone (031) 440-2726 or 0977

Questions regarding papers should be directed to Judy Cuddihy, Managing Editor, at Cold Spring Harbor Laboratory (516-367-8492).

Manuscript Preparation

1. General. There are no set limits on the length of the papers published in Genes and Development. The entire paper (including tables, figure legends, references, footnotes) should be typed double-spaced on standard-sized European or American bond paper with at least 1-in (2.5 cm) margins on all four sides. Computer printouts should be of letter quality. Each page should be labeled with the first author's name and a page number. Five copies should be submitted; at least four of these copies should have original art. A cover letter should include: (a) name, address, and telephone number of author responsible for correspondence regarding the manuscript; (b) statement that the manuscript has been seen and approved by all listed authors; (c) any specific requirements for reproduction of art, and (d) status of any permissions needed.

2. Submitting Papers on Computer Discs. Publication can be speeded up if accepted papers are supplied on 5¼-inch floppy discs. We can accept over 150 CPM formats, in IBM, PC, AT, and XT (1.2 meg or 360K floppy), or compatible formats. Please supply the manuscript on the disc as a "text" file, if possible. If a word-processing file is being sent, do not use any under-scoring, italics, boldface, spell out special characters [Greek, math], use two carriage returns at the end of each paragraph, subheads, and list items. Indicate on the disc: computer brand name, whether the disc contains a text or word-processing file [name of software], and the disc format. Five hardcopy versions should also be submitted for use by referees and editors.

3. Form. The following order is preferred: Title page, Abstract, Introduction, Results, Discussion, Methods, Acknowledgments, References, Tables, Figure legends. The Title page should include: (a) title, (b) all authors' full names, (c) all affiliations clearly indicated, (d) a shortened version of the title for use as a running head [maximum 45 characters], and (e) key words (up to 6) for use in indexing. The Abstract should be about 200 words long and should summarize the aim of the report, the methodological approach, and the significance of the results. Methods will appear at the end of the paper and should be detailed enough to allow any qualified researcher to duplicate the results.

4. Figures and Legends. Figures should be supplied as high-quality glossy prints. Half-tones should be high-contrast, particularly in the case of gels, for the best reproduction. If accurate reproduction is crucial, please describe your requirements in your cover letter so that the best possible reproduction method can be selected. Line drawings, graphs, charts, and chemical formulae should be professionally prepared and labeled.

The back of each figure should be labeled with the first author's name, figure number, and an indication of "top." The figures should be numbered consecutively in the order to which they are referred in the text. The size of the figures will be adjusted to fit the journal format, therefore please try to keep labels, symbols, and other call-out devices in proportion to the figure size and detail.

Figure legends should be brief and should not contain methods. Symbols indicated in the figure should be identified in the legend text. If figures are reprinted from another source, permission to reprint is required.

5. Tables. Tabular data should be presented concisely and logically. Tables should be numbered consecutively according to the order cited in the text and each should have a title. Use only horizontal rules and make sure column headings are unambiguous in indicating columns to which they refer. Table legends and footnotes should be included where needed. If tables are reprinted from another source or if data included are from another source, permission to reprint is required.

6. References. References are name/date citations in text; please do not cite by number. Undated citations [unpublished, in preparation, personal communication] should include first initials and last names of authors. Bibliographic information should be supplied in the following order. For journal articles: Author(s), year, article title, journal title, volume, inclusive page numbers. For books: Author(s), year, chapter title, book title, editors' names, volume, inclusive page numbers, publisher, city of publication.

7. Proofs. Proofs are considered the final form of the paper and correction can be made only in the case of factual errors. If additional information must be added at this stage, it should be in the form of "Note added in proof," subject to the approval of the editors.

8. Reprints. A reprint order form will be included with the proofs.
A VIDEO GUIDE:
TRANSGENIC TECHNIQUES IN MICE

Instructors:
Dr. Roger Pedersen; University of California, San Francisco;
Dr. Janet Rossant; University of Toronto

The techniques required to manipulate mouse embryos require a range of skills from the basic to the advanced. Many of these techniques were included in the Cold Spring Harbor Laboratory manual, MANIPULATING THE MOUSE EMBRYO.

The Laboratory’s introductory video guide is an adjunct to this manual and provides step-by-step demonstrations of the following techniques:

Demonstration 3: Recovery of blastocysts.
Demonstration 4: DNA injection into pronuclei to produce transgenic embryos.
Demonstration 5: Nuclear transfer.
Demonstration 6: Blastocyst injection of inner cell mass and embryonic stem cells.
Demonstration 7: Vasectomizing male mice.
Demonstration 8: Oviduct transfer of manipulated embryos.
Demonstration 9: Uterine transfer of manipulated embryos.
Demonstration 10: Dissection of 6½ and 7½ day embryos.
Demonstration 11: Dissection of midgestation 12½ day embryos and fetal membranes.

Manipulating the Mouse Embryo
A Laboratory Manual

By B.L.M. Hogan, National Institute for Medical Research; F. Costantini, Columbia University; E. Lacy, Memorial Sloan-Kettering Cancer Center

CONTENTS
Developmental Genetics and Embryology of the Mouse: Past, Present, and Future;
Summary of Mouse Development;
Setting Up a Colony for the Production of Transgenic Mice;
Recovery, Culture, and Transfer of Embryos;
Introduction of New Genetic Information into the Developing Mouse Embryo;
Isolation of Pluripotential Stem Cell Lines;
Techniques for Visualizing Genes and Gene Products;
In Vitro Culture of Eggs, Embryos, and Teratocarcinoma Cells;
Chemicals, Supplies, and Solutions

1986, 332 pp., illus., color plates, appendixes, bibliography, index
Paper $60
