INFORMATION FOR CONTRIBUTORS

Aims and Scope

Genes & Development welcomes high-quality research papers that address questions concerning the regulation and expression of genes of any organism or virus. Publication time from acceptance of manuscript is between two and three months. For papers accepted subject to revision, only one revised version will be considered, it must be submitted within 3 months of the provisional acceptance.

Submission of Papers

The journal accepts papers which present original research that has not previously been published. Submission to the Journal implies that a paper is not currently being considered for another journal or book. It is also understood that researchers who submit papers to this journal are prepared to make available to qualified academic researchers materials needed to duplicate their research results (probes, plasmids, clones, sequences, and the like).

Contributors from North and South America, and Australia should submit their papers to:

Judy Cuddihy, Managing Editor
Cold Spring Harbor Laboratory
P.O. Box 100
Cold Spring Harbor, New York 11724, USA
Phone (516) 367-8492

Contributors from Europe, Asia, and Africa should submit their papers to:

Graham Bullfield, Editor
AFRC Institute of Animal Physiology & Genetics Research
Edinburgh Research Station
Roslin, Midlothian EH25 9PS, UK
Phone (031) 440-2726 or 0977

Questions regarding papers should be directed to Judy Cuddihy, Managing Editor, at Cold Spring Harbor Laboratory (516-367-8492).

Manuscript Preparation

1. General. There are no set limits on the length of the papers published in Genes and Development. The entire paper (including tables, figure legends, references, footnotes) should be typed double-spaced on standard-sized European or American bond paper with at least 1-in (2.5 cm) margins on all four sides. Computer printouts should be of letter quality. Each page should be labeled with the first author's name and a page number. Five copies should be submitted; at least four of these copies should have original art. A cover letter should include: (a) name, address, and telephone number of author responsible for correspondence regarding the manuscript; (b) statement that the manuscript has been seen and approved by all listed authors; (c) any specific requirements for reproduction of art; and (d) status of any permissions needed.

2. Submitting Papers on Computer Discs. Publication can be speeded up if accepted papers are supplied on 5¼-inch floppy discs. We can accept over 150 CPM formats, in IBM, PC, AT, and XT (1.2 meg or 360K floppy), or compatible formats. Please supply the manuscript on the disc as a "text" file, if possible. If a word-processing file is being sent, do not use any under-scoring, italic, or boldface; spell out special characters (Greek, math); use two carriage returns at the end of each paragraph, subheads, and list items. Indicate on the disc: computer brand name, whether the disc contains a text or word-processing file [name of software], and the disc format. Five hardcopy versions should also be submitted for use by referees and editors.

3. Form. The following order is preferred: Title page, Abstract, Introduction, Results, Discussion, Methods, Acknowledgments, References, Tables, Figure legends. The Title page should include: (a) title; (b) all authors' full names; (c) all affiliations clearly indicated; (d) a shortened version of the title for use as a running head (maximum 45 characters), and (e) key words (up to 6) for use in indexing. The Abstract should be about 200 words long and should summarize the aim of the report, the methodological approach, and the significance of the results. Methods will appear at the end of the paper and should be detailed enough to allow any qualified researcher to duplicate the results.

4. Figures and Legends. Figures should be supplied as high-quality glossy prints. Half-tones should be high-contrast, particularly in the case of gels, for the best reproduction. If accurate reproduction is crucial, please describe your requirements in your cover letter so that the best possible reproduction method can be selected. Line drawings, graphs, charts, and chemical formulae should be professionally prepared and labeled.

The back of each figure should be labeled with the first author's name, figure number, and an indication of "top." The figures should be numbered consecutively in the order in which they are referred to in the text. The size of the figures will be adjusted to fit the journal format, therefore please try to keep labels, symbols, and other call-out devices in proportion to the figure size and detail.

Figure legends should be brief and should not contain methods. Symbols indicated in the figure should be identified in the legend text. If figures are reprinted from another source, permission to reprint is required.

5. Tables. Tabular data should be presented concisely and logically. Tables should be numbered consecutively according to the order cited in the text and each should have a title. Use only horizontal rules and make sure column headings are unambiguous in indicating columns to which they refer. Table legends and footnotes should be included where needed. If tables are reprinted from another source or if data included are from another source, permission to reprint is required.

6. References. References are name/date citations in text; please do not cite by number. Undated citations (unpublished, in preparation, personal communication) should include first initials and last names of authors. Bibliographic information should be supplied in the following order. For Journal articles: Author(s), year, article title, journal title, volume, inclusive page numbers. For books: Author(s), year, chapter title, book title, editors' names, volume, inclusive page numbers, publisher, city of publication.

7. Proofs. Proofs are considered the final form of the paper and correction can be made only in the case of factual errors. If additional information must be added at this stage, it should be in the form of "Note added in proof," subject to the approval of the editors.

8. Reprints. A reprint order form will be included with the proofs.
The second edition of Molecular Cloning: A Laboratory Manual is a completely revised and extended version of the book published in 1982 by the same authors, to international acclaim. Ten of its 17 chapters are entirely new and the manual now provides comprehensive coverage of the methods that are essential in current molecular biology research. Each technique is described with clear, step-by-step instructions but the principles underlying it are also included and guidance on avoiding and solving difficulties is given.

This edition of the manual will be published in two volumes which, like the first edition, are designed to be convenient and durable for intensive laboratory use. It contains the following chapters:

**Book 1**
1. Plasmid Vectors
2. Bacteriophage Lambda Vectors
3. Cosmid Vectors
4. Single-Stranded, Filamentous Bacteriophage Vectors
5. Enzymes Used in Molecular Cloning
6. Gel Electrophoresis of DNA
7. Extraction, Purification, and Analysis of mRNA from Eukaryotic Cells
8. Construction and Analysis of cDNA Libraries
9. Analysis and cloning of Eukaryotic Genomic DNA

**Book 2**
10. Preparation of Radiolabeled DNA and RNA
11. Synthetic Oligonucleotide Probes
12. Screening with Antibody Probes
13. Sequencing of DNA
14. Mutagenesis of Cloned DNA
15. Expression of Cloned Genes in Cultured Mammalian Cells
16. Expression of Cloned Genes in *Escherichia coli*
17. Detection of Proteins Expressed from Cloned Genes Analysis

The new manual is more than a collection of laboratory protocols. Like its predecessor it will be an indispensable resource on the laboratory benches of individual investigators in both academic and industrial laboratories. The manual will provide the protocols that will become standard in the years to come.

L-Methionine, \([^{35}\text{S}]\)

From ICN Radiochemicals

L-Methionine, \([^{35}\text{S}]\) is now available from ICN Radiochemicals Division. Our L-Methionine, \([^{35}\text{S}]\) has been extensively tested for in vitro translations. The results of our laboratory data are available for your review.
