Cold Spring Harbor Laboratory is renowned for its teaching of biomedical research techniques. For decades, participants in its celebrated, hands-on courses and users of its laboratory manuals have gained access to the most authoritative and reliable methods in molecular and cellular biology. Now that access has moved online.

Visit Cold Spring Harbor Protocols today and discover a rich, interactive source of new and classic research techniques. The site is fully searchable, with many tools that can be customized by users, including topic-based alerting and personal folders. Through a web-based editorial process, users also have the opportunity to add refereed comments to each protocol. Links in the online protocols offer additional resources and step-by-step instructions print out in a convenient form, complete with materials, recipes, and troubleshooting advice. Each protocol is citable, presented, and edited in the style that has made Molecular Cloning, Antibodies, Cells, and many other Cold Spring Harbor manuals essential to the work of scientists worldwide. The current collection of more than 1000 protocols is continuously expanded, updated, and annotated by the originators and users of the techniques.

Featured in Cold Spring Harbor Protocols:

Emerging Model Organisms, a full-fledged guide to the use of new model systems in the laboratory, covering husbandry, genetics, genomics and basic protocols.

ISSN 1559-6095 / online, monthly

TrueORF Gold cDNA Clones

Protein Expression Guaranteed!

Why settle for clones with little validation?

Choose TrueORF Gold.

Expression validated by Western
Sequence verified
Transfection ready
Easily shuttled into 60 vectors
Next-day shipment

BioRadiations
The Next Generation

Old Favorite, New Forum

Since 1965, BioRadiations has been the go-to resource for researchers around the world to learn about the latest Bio-Rad products and services.

The next generation of this classic publication offers deeper and more lively content in an online format:

- Video interviews with renowned researchers
- Tips and techniques, product insights, and technical reports
- A searchable archive

Browse the latest articles and multimedia content at www.bioradiations.com. Register to become an active participant in the scientific dialog — receive advance updates, rate articles, and post comments on them.

Research. Together.

Interested in what’s going on in the George Church Lab at Harvard University’s Wyss Institute? Visit our multimedia section to watch our interview with postdoctoral fellow Sriram Kosuri.
Mount Desert Island Biological Laboratory (MDIBL) is an independent basic and biomedical research and education institution with expertise in the areas of regenerative and developmental biology, cellular stress biology, membrane physiology, comparative and evolutionary biology, bioinformatics, neuroscience, and marine ecology and conservation. Resident and visiting faculty at MDIBL utilize a variety of model systems in their work including experimentally tractable organisms such as *C. elegans*, zebrafish, axolotl, sea urchin, *Xenopus*, Fundulus and *Daphnia*. Extensive facilities are available for acquisition, maintenance and study of diverse marine vertebrates and invertebrates.

MDIBL is located on Mount Desert Island, Maine, next to Acadia National Park. The area boasts spectacular coastal and inland scenery, extensive outdoor activities including hiking, sailing, kayaking, rock climbing and skiing, a vibrant year-round community with numerous unique cultural opportunities and bustling summer activity.

**Courses – Summer 2012**

2012 Registration now open:
- Quantitative Fluorescence Microscopy – May 18-25
- Evolution and Medicine: Infection and Cancer – August 6-10
- Health and Colony Mgt. of Laboratory Fish – August 13-17
- Environmental Genomics – August 18-25
- Origins of Renal Physiology – September 2-9

**Faculty Positions in Regenerative and Aging Biology**

MDIBL is in a period of rapid growth and development. We are seeking outstanding scientists for recruitment at the assistant, associate and full professor levels. Successful applicants will have research programs focused broadly on regenerative and aging biology, will be addressing significant questions in these areas at an integrative level using state-of-the-art genomic, genetic and molecular approaches, and will be utilizing non-mammalian model organisms. Candidates must possess a Ph.D. or M.D. degree and have a strong record of continuous research productivity and either active funding or clearly demonstrated potential for funding.

MDIBL provides a uniquely collaborative and multidisciplinary research environment, outstanding scientific resources, and at least 80% protected time for development and maintenance of independent, externally funded faculty research programs. Start-up packages and salary are highly competitive and commensurate with current rank and experience. Successful candidates will have appointments in the Davis Center for Regenerative Biology and Medicine, and adjunct appointments at neighboring academic research institutions.

Please apply electronically at [http://www.mdibl.org/job_opportunities.php](http://www.mdibl.org/job_opportunities.php). Please include a cover letter, vitae, detailed research and career development plans, and the names and addresses for four references. Review of applications will continue until the positions are filled.

**Contact:** Kristine Reaman, kreaman@mdibl.org

MDIBL is an AA/E O employer.

**Seasonal Fellowships at MDIBL**

Applications are invited for seasonal and sabbatical research fellowships for 2012. Fellowships cover lab rental, housing, user fees and supplies. The length of fellowship appointments is flexible. Candidates must possess a Ph.D. or M.D. degree and demonstrate a record of research productivity consistent with their current rank. Applications are encouraged from scientists working in both academia and industry.

For fellowship or sabbatical application instructions and the online application see: [http://www.mdibl.org/visiting_scientist_program.php](http://www.mdibl.org/visiting_scientist_program.php).

**Deadline for seasonal fellowship applications is January 6, 2012.**

Sabbatical applications will be accepted throughout the year.

Announcing Keystone Symposia’s
Genetics & Development Meetings

great opportunities for learning, debate and collaboration-building

Epigenomics, joint with Chromatin Dynamics
January 17–22, 2012 • Keystone Resort • Keystone, Colorado • USA
Organizers: Steven E. Jacobsen and Steven Henikoff

Keynote Speaker:
Richard A. Young, Whitehead Institute for Biomedical Research
Chromatin and the Control of Pluripotency and Differentiation
www.keystonesymposia.org/12J3

Genetic and Molecular Basis of Obesity and Body Weight Regulation, joint with Pathogenesis of Diabetes: Emerging Insights into Molecular Mechanisms
January 29–February 3, 2012 • Santa Fe Community Convention Center • Santa Fe, New Mexico • USA
Organizers: Evan D. Rosen, Dawn L. Brasaemle and Bart Staal

Keynote Speakers:
Aldons J. Lusis, University of California, Los Angeles
Systems Genetics Analysis of Complex Interactions in Cardiometabolic Traits
Daniel J. Rader, University of Pennsylvania Medical Center
From GWAS to Gene Function: Genetics and Physiology of Lipid and Lipoprotein Metabolism
www.keystonesymposia.org/12J7

Complex Traits: Genomics and Computational Approaches
February 20–25, 2012 • Beaver Run Resort • Breckenridge, Colorado • USA
Organizers: Eric Schadt, Stephen H. Friend and Ilya G. Khalil

Keynote Speaker:
Leroy E. Hood, Institute for Systems Biology
The Need to Integrate and Build Systems-Level Models of Disease to Revolutionize Medicine and Impact on Patient and Human Well-Being
www.keystonesymposia.org/12B5

Non-Coding RNAs and Eukaryotic Transcription
March 31–April 5, 2012 • Snowbird Resort • Snowbird, Utah • USA
Non-Coding RNAs Organizers: John S. Mattick, Jeannie T. Lee and Kevin Y. Morris
Eukaryotic Transcription Organizers: David S. Gilmour, Ramin Shiekhattar, Barbara Panning and Irwin Davidson

Keynote Speakers:
Nicholas J. Proudfoot, University of Oxford
Transcriptional interactions between Adjacent Genes in Eukaryotes: Multiple Origins and Functions of ncRNA
Gerald R. Crabtree, Stanford University
ATP-Dependent Chromatin Remodeling: Developmental Roles That Go Bad in Human Cancer
www.keystonesymposia.org/12Z1 and www.keystonesymposia.org/12Z2

Keystone Symposia on Molecular and Cellular Biology is a 501(c)3 nonprofit organization headquartered in Colorado, USA that is directed and supported by the scientific community.
