Contents

Reviews

Dynamics of DNA damage response proteins at DNA breaks: a focus on protein modifications
Sophie E. Polo and Stephen P. Jackson

Research Communications

Synthetic circuit identifies subpopulations with sustained memory of DNA damage
Devin R. Burrill and Pamela A. Silver

The anti-tumor drug E7107 reveals an essential role for SF3b in remodeling U2 snRNP to expose the branch point-binding region
Eric G. Folco, Kaitlyn E. Coil, and Robin Reed

Research Papers

Reduced fidelity of branch point recognition and alternative splicing induced by the anti-tumor drug spliceostatin A
Anna Corrionero, Belén Miñana, and Juan Valcárcel

Activated Ras requires autophagy to maintain oxidative metabolism and tumorigenesis

Zeppo1 is a novel metastasis promoter that represses E-cadherin expression and regulates p120-catenin isoform expression and localization
Euan M. Slorach, Jonathan Chou, and Zena Werb

EZH1 and EZH2 cogovern histone H3K27 trimethylation and are essential for hair follicle homeostasis and wound repair
Elena Ezhkova, Wen-Hui Lien, Nicole Stokes, H. Amalia Pasolli, Jose M. Silva, and Elaine Fuchs

An MLL/COMPASS subunit functions in the C. elegans dosage compensation complex to target X chromosomes for transcriptional regulation of gene expression
Rebecca R. Pferdehirt, William S. Kruesi, and Barbara J. Meyer

(continued)
The fission yeast meiosis-specific Dmc1 recombinase mediates formation and branch migration of Holliday junctions by preferentially promoting strand exchange in a direction opposite to that of Rad51
Yasuto Murayama, Yasuhiro Tsutsui, and Hiroshi Iwasaki
