PhotoFluor® LM-75

The world’s first direct-mounted metal halide light source.

89 North’s PhotoFluor LM-75 is designed for extended use with minimal down time and maximum benefits.

Direct mounting eliminates need for unreliable liquid light guides.

As much or more stable power at the sample than a 200W metal halide light source.

Broad spectrum with strong UV is compatible with any filter set.

Pre-aligned, user-exchangeable lamp with a long lifetime.

Extremely quiet operation with minimal heat production in rooms with multiple microscopes.

Built-in DC ballast eliminates need for external control box, reducing needed bench space.

Low up-front cost and lower overall cost of ownership than other fluorescence light sources.

Contact 89 North for your ideal light source for fluorescence in situ hybridization.

ET FISH Filter Sets

High-performance filter sets for fluorescence in situ hybridization.

Chroma’s ET FISH filter sets provide brighter signals and excellent color separation for accurate scoring.

Eliminate bleedthrough of Gold and Aqua from Green signals to reliably discriminate between Aqua/Green/Gold/Red.

Dual Band Sets with balanced Green/Orange and Green/Red signals for different light sources.

Zero-pixel-shift sets for perfect image registration.

Contact Chroma for assistance in choosing filters for your fluorescent genetic testing application.

Cell Sciences is an innovative company serving the life science community as a supplier of quality research antibodies, proteins and immunoassay kits.

Our products include ELISA and ELISPOT kits, flow cytometry reagents, monoclonal and polyclonal antibodies, native and recombinant proteins, cell lysates, and other associated reagents. These products address research in human, non-human primate, and small and large animal models.

Our diverse range of research and development tools including cytokines, chemokines, CD antigens, adhesion molecules, ECM molecules, growth factors, hormones, enzymes, kinases, phosphatases, signal transduction mediators, viral proteins, and toxins.

We are passionate about providing the highest quality products and customer support to advance research and product development in fields such as immunology, inflammation, innate immunity, developmental biology, apoptosis, cell differentiation, cancer, stem cell research, coagulation, thrombolysis, hematology, endocrinology, neurobiology, angiogenesis, tissue engineering, and wound healing.
rRNA Depletion - Do it reasonably

RiboCop rRNA Depletion Kit

Crude RNA extract contains a vast amount of ribosomal RNA which is usually of less interest to most researchers, and depletion of those molecules is a critical process for efficient RNA-Seq.

However, with the solutions offered to date, it has been one of the most cost consuming processes within the RNA-Seq pipeline. We at Lexogen do not think this is reasonable at all. We believe ribosomal RNA depletion should be easy and affordable for all researchers, and therefore we introduced the RiboCop rRNA Depletion Kit.

- Elimination of cytoplasmic and mitochondrial ribosomal RNA
- 1 hour of hands-on time
- USD 29.7/sample*

Free trial kits are available

*For a kit with 96 preps.
Join us in New Orleans
for the best cancer science and medicine meeting in the world... the AACR Annual Meeting 2016!

You are invited to stretch your boundaries, form collaborations, attend sessions outside of your own area of expertise, and learn how to apply exciting new concepts, tools, and techniques to your own research.

Get your fill of ground-breaking cancer science each day, and then enjoy the great sounds, food, and culture that is New Orleans.

If you can only attend one cancer science meeting this year, the AACR’s Annual Meeting is it!

Be sure to register early to take advantage of reduced rates!

Become a Member!

Join the AACR and enjoy substantially reduced registration rates, the privilege of sponsoring an abstract for the Annual Meeting, funding and award opportunities, and much more.

We look forward to seeing you in New Orleans!
Clinical Applications of Stem Cells

24 - 25 February 2016, Academia, Singapore General Hospital Campus

Keynote Speaker
Sir Roy Calne
Professor Emeritus of Surgery
University of Cambridge

Agenda Topics
- Adult Stem Cells for Cellular Therapy
- Adipose-derived Stem Cells
- Adult Stem Cell Banking
- Clinical Translational Applications with Pluripotent Stem Cells
- Cosmetic Surgery and Associated Applications
- Current State of the Science
- Dental Applications
- Disease Classes Addressed and Current Status of Ongoing Clinical Trials
- Orthopaedic Applications
- Regulatory Landscape and Ethical Considerations
- Research vs. Clinical Challenges in Stem Cell Translation
- The Path to Commercialization
- Umbilical Cord Blood-derived Stem Cells
- Veterinary Applications of Stem Cells
- Wound and Burn Healing

Single Molecule & Single Cell Analysis
15 - 16 March 2016 • Madrid, Spain
#SMSCA2016

Keynote Speakers

Chwee Teck Lim
Professor
National University of Singapore

Menno Prins
Professor
Eindhoven University of Technology

Ulf Landegren
Principal Investigator
University of Uppsala

Whether you are working in research & development, device integration, sample preparation, information management or device manufacturing, this meeting will explore the key challenges you face.

Registered delegates also benefit from unrestricted access to the co-located meetings, Lab-on-a-Chip Europe and Point of Care Diagnostics.

Agenda Topics

- Biological Heterogeneity
- Single Molecule Sequencing
- Liquid Biopsies
- Single Molecule Biosensing
- Digital PCR

Poster submission deadline
08 March 2016

Register Now and save up to €200
