Silane Vapor Deposition

- DNA and Oligonucleotide adhesion
- Antifouling coating for medical devices
- Promote biocompatibility between natural and synthetic materials
- Suitable for glass, stainless steel, silicon and more

- Minimal chemical usage compared to wet application processes, significantly reducing waste and chemical costs

microRNA ISH
– robust and ready for automation!

ISH probes optimized for automation and multiplexing

The new generation of miRCURY LNA™ microRNA Detection Probes are Tm normalized to enable robust automation of
in situ hybridization using the same standardized protocol to
detect several microRNA targets – ideal for implementation
in the clinical pathology laboratory.

Our validated One-day microRNA ISH protocol for FFPE tissue
sections also facilitates the detection of two microRNA targets
on the same slide, and co-localization of microRNA with target
protein.

miRCURY LNA™ microRNA Detection Probes
Sensitive and specific ISH

Join us in Washington, DC
for the latest innovative and inspiring cancer research from around the world...
the AACR Annual Meeting 2017!

You won’t want to miss this five-day, comprehensive program offering world-class opportunities to learn, collaborate, and share not only the progress made in cancer research, but also the promise of what is to come. This new era of cancer discovery is unprecedented with respect to rapidly emerging cancer science and new and effective molecularly targeted therapies.

The best and brightest researchers in the world will attend this meeting that covers every aspect of cancer – from molecular biology, clinical studies, epidemiology, and prevention to survivorship. And you’ll want to be among them.

We look forward to seeing you in Washington, DC!
DESIGN - ENGINEER - INNOVATE

CRISPR

Your complete line of CRISPR genome editing tools

- The most comprehensive commercial screening portfolio from MilliporeSigma, the leader in lentiviral manufacturing
- SygRNA™, synthetic crRNA and tracrRNA, in conjunction with Cas9 protein offer fast turnaround time to accelerate your experimental results
- Advanced technical support to enhance your gene editing efforts. Contact CRISPR@sial.com with your genome editing questions
