IN THIS ISSUE

Note from the Editor

The special section of review articles below is in honor of the centenary of the Genetics Society. The Genetics Society has been one of the founding supporters of *Genes & Development*, along with the Cold Spring Harbor Laboratory and the late Steve Prentice and Grahame Bulfield, who served as the first Editors, followed by Mike Mathews. In addition, the journal has had outstanding European Editors over several years; namely, Nick Hastie, Davor Solter, Rudi Grosschedl, and Winship Herr.

The articles published below reflect the progress in both technology and discoveries that has occurred in recent years. They concern aspects of gene regulation at different levels and the resulting effects on various normal and disease processes. We expect that further review articles in this general area will be published in future months of this anniversary year.
