Now in a new edition

A Dictionary of Genetics Fourth Edition
ROBERT C. KING and WILLIAM D. STANFIELD
“The genetical lexicographer’s dream…. No more appropriate or concise guide to the terminology of the confusing, booming state of genetics today can be found…. Indispensable.”—Quarterly Review of Biology (on 3rd ed.)
1990 • 416 pp.; 251 illus. • paper $19.95/cloth $39.95

Genes IV
BENJAMIN LEWIN
“This 4th edition of a popular textbook has been brought up-to-date and presents the DNA/RNA/protein stories in a clear, readable and didactic manner…. The book is well illustrated and presented and will delight and interest students.”—Comparative Biochemistry & Physiology. “Extremely up to date…. A remarkable amount of information.”—The Scientist (Oxford University Press—Cell Press)
1990 • 870 pp.; 800 illus. • $45.00

Evolutionary Biology of Aging
MICHAEL R. ROSE
This provocative study proposes a new biology of aging based on evolutionary theory, arguing that the force of natural selection declines proportionally after the onset of reproduction, thus permitting susceptibility to physical deterioration.
1990 • 240 pp.; 48 illus. • $35.00

Intervening Sequences in Evolution and Development
Edited by EDWIN M. STONE and ROBERT J. SCHWARTZ
The first comprehensive treatment of intervening sequences (introns) in genetic material, this unique treatise brings readers a wealth of previously scattered information in one convenient source.
1990 • 216 pp.; 57 illus. • $39.95

Genes and Embryos
Frontiers in Molecular Biology
Edited by D.M. GLOVER and B.D. HAMES
Provides up-to-date information on key areas in developmental molecular biology.
1989 • 244 pp.; 46 illus. • paper $39.00/cloth $59.00

Convergent Issues in Genetics and Demography
Edited by JULIAN ADAMS, et al.
Provides up-to-date coverage of genetics and demography, fields that are increasingly closely related, with many topics and approaches in common.
1990 • 376 pp.; 57 illus. • $49.95

Genetic Variants and Strains of the Laboratory Mouse
For the International Committee on Standardized Genetic Nomenclature for Mice
Second Edition
Edited by MARY F. LYON and ANTHONY G. SEARLE
This is the first comprehensive reference work for information on genes and other genetic variants of the mouse. It provides descriptions of, and references for, all gene loci and chromosome anomalies.
1989 • 896 pp.; illus. • $175.00

The Fragile X Syndrome
Edited by KAY E. DAVIES
Here is an up-to-date review of the clinical, epidemiological, and cytogenetic aspects of the fragile X (Martin-Bell) syndrome—the most common genetic cause of mental retardation after Down syndrome.
(Molecular Medicine)
1989 • 148 pp.; 33 illus. • paper $27.50

Now available from ICN Biomedicals, Inc., Chloramphenicol, D-threo-[1, 2-\(^{14}\)C] for monitoring promoter activity in promoter CAT fusion.

Chloramphenicol is a substrate for the bacterial enzyme Chloramphenicol Acetyltransferase (CAT). Quantitation of the acetylated product has become a standard measurement of promoter activity in transfected mammalian cells of promoter sequences linked to the CAT gene.
