Master 96 wells with two simple instruments.

One pipettes...
The Brinkmann Transferpette™ 8/12 fits comfortably in your hand while you are performing 8- and 12-channel sample transfers and serial dilutions.

The other repeats...
The Eppendorf Repeater Plus/8™ reduces the fatigue of routinely filling 96-well plates by rapidly dispensing up to 48 times without refilling.

And Brinkmann has both.
Both instruments have unique features to help you master your laboratory procedures.

Contents

Research papers

Subunits shared by eukaryotic nuclear RNA polymerases
Nancy A. Woychik, Sha-Mei Liao, Peter A. Kolodziej, and Richard A. Young

A specific terminal structure is required for Ty1 transposition
D.J. Eichinger and J.D. Boeke

Somatically heritable switches in the DNA modification of Mu transposable elements monitored with a suppressible mutant in maize
Robert Martienssen, Alice Barkan, William C. Taylor, and Michael Freeling

Temporal and spatial regulation of the symbiotic genes of Rhizobium meliloti in planta revealed by transposon Tn5–gusA
Shashi B. Sharma and Ethan B. Signer

The Caenorhabditis elegans gene lin-10 is broadly expressed while required specifically for the determination of vulval cell fates
Stuart K. Kim and H. Robert Horvitz

HNF-1 shares three sequence motifs with the POU domain proteins and is identical to LF-B1 and APF
Susanne Baumhueter, Dirk B. Mendel, Pamela B. Conley, Calvin J. Kuo, Christoph Turk, Mary K. Graves, Cynthia A. Edwards, Gilles Courtois, and Gerald R. Crabtree

Human γ- to β-globin gene switching in transgenic mice
Richard R. Behringer, Thomas M. Ryan, Richard D. Palmiter, Ralph L. Brinster, and Tim M. Townes

W mutant mice with mild or severe developmental defects contain distinct point mutations in the kinase domain of the c-kit receptor
Alastair D. Reith, Robert Rottapel, Elizabeth Giddens, Claire Brady, Lesley Forrester, and Alan Bernstein

Rapid and transient expression of Ets2 in mature macrophages following stimulation with cMGF, LPS, and PKC activators
Kim E. Boulukos, Philippe Pognonec, Eric Sariban, Manuella Bailly, Christian Lagrou, and Jacques Ghysdael

DNA looping in cellular repression of transcription of the galactose operon
Nitai Mandal, Wen Su, Roberta Haber, Sankar Adhya, and Harrison Echols

A developmentally regulated trans-acting factor recognizes dissimilar G/C-rich elements controlling a class of cAMP-inducible Dictyostelium genes
Annegrethe L. Hjorth, Catherine Pears, Jeffrey G. Williams, and Richard A. Firtel

Spatial and temporal control elements of the Drosophila engrailed gene
Judith A. Kassis
Analysis of cis-acting requirements of the Rh3 and Rh4 genes reveals a bipartite organization to rhodopsin promoters in Drosophila melanogaster
Mark E. Fortini and Gerald M. Rubin

The Notch locus and the genetic circuitry involved in early Drosophila neurogenesis
Tian Xu, Ilaria Rebay, Robert J. Fleming, T. Nelson Scottgale, and Spyros Artavanis-Tsakonas

Erratum

Cover Visualization of a subset of Drosophila R7 photoreceptor cells and their axonal projections using an Rh4–lacZ fusion. [For details, see Fortini and Rubin, p. 444.]
