Research papers

Functional overlap in the src gene family: inactivation of hck and fgr impairs natural immunity
Clifford A. Lowell, Philippe Soriano, and Harold E. Varmus

The mouse waved-2 phenotype results from a point mutation in the EGF receptor tyrosine kinase
Noreen C. Luetteke, Harmony K. Phillips, Ting H. Qiu, Neal G. Copeland, H. Shelton Earp, Nancy A. Jenkins, and David C. Lee

Activin/inhibin βB subunit gene disruption leads to defects in eyelid development and female reproduction
Anne Vassalli, Martin M. Matzuk, Humphrey A.R. Gardner, Kuo-Fen Lee, and Rudolf Jaenisch

Elucidation of the role of breathless, a Drosophila FGF receptor homolog, in tracheal cell migration
Michal Reichman-Fried, Barry Dickson, Ernst Hafen, and Ben-Zion Shilo

Distinct molecular mechanisms regulate cell cycle timing at successive stages of Drosophila embryogenesis
Bruce A. Edgar, Frank Sprenger, Robert J. Duroinio, Pierre Leopold, and Patrick H. O'Farrell

CHOP (GADD153) and its oncogenic variant, TLS–CHOP, have opposing effects on the induction of G1/S arrest
M. Vittoria Barone, Anne Crozat, Arash Tabae, Lennart Philipson, and David Ron

A sequence-specific, single-stranded binding protein activates the far upstream element of c-myc and defines a new DNA-binding motif
Robert Duncan, Leonard Bazar, Greg Michelotti, Takeshi Tomonaga, Henry Krutzsch, Mark Avigan, and David Levens

Molecular analysis of reverse mutations from nonagouti (a) to black-and-tan (a') and white-bellied agouti (A^w) reveals alternative forms of agouti transcripts

A common pyrimidine-rich motif governs trans-splicing and polyadenylation of tubulin polycistronic pre-mRNA in trypanosomes
Keith R. Matthews, Christian Tschudi, and Elisabetta Ullu

Cloning and characterization of the G-box binding factor, an essential component of the developmental switch between early and late development in Dictyostelium
Gavin R. Schnitzler, Wolfgang H. Fischer, and Richard A. Firtel

Cover  Cloning and characterization of the G-box binding factor in Dictyostelium. (Background) gbf null cells at 20 hr of development; [inset] gbf null and wild-type cells that coaggregate and form a chimeric mound. (For details, see Schnitzler et al., p. 502.)
