Nucleases, Second Edition

Monograph 25
Edited by Stuart M. Linn, University of California, Berkeley; R. Stephen Lloyd, University of Texas Medical Branch, Galveston; Richard J. Roberts, New England Biolabs

The 1982 publication Nucleases was the first book to survey this diverse and important group of enzymes. The new edition has been completely revised and updated. It provides a comprehensive review of all classes of nucleases, their modes of action and biological significance. The book is an invaluable source of information for investigators of DNA replication, recombination and repair and RNA processing, and for everyone interested in the rational use of nucleases as research reagents.

1993, 499 pp., illus., appendices, index
Cloth $75 ISBN 0-87969-426-2

DNA and Chromosomes
Cold Spring Harbor Symposia on Quantitative Biology, Volume LVIII

Over 70 of the world’s leading investigators discuss how DNA is replicated and repaired, genes are activated, silenced and transcribed, chromosomes replicate and move, and genomes are constructed. A unique compilation of recent insights into the most pressing questions in molecular genetics and cell biology.

Proceedings of the 1993 Symposium
Due first quarter 1994, 950 pp. (approx.), illus., color plates, indexes
Cloth $210 ISBN 0-87969-065-8
Paper $95 ISBN 0-87969-066-6

The RNA World

Monograph 24
Edited by Raymond F. Gesteland, University of Utah; John F. Atkins, University of Utah. With Foreword by Francis Crick and Prologue by James D. Watson

"The lively and authoritative chapters of this book deal comprehensively both with the hypothetical RNA world and with the complexities of RNA structure and function we find around us today. I recommend it to all molecular biologists and especially to anyone fascinated by the baroque complexity of the nucleic acids and of RNA in particular."

-Francis Crick

1993, 632 pp., illus., appendices, index
Cloth $95 ISBN 0-87969-380-0

Reverse Transcriptase

Monograph 23
Edited by Anna Marie Skalka, Fox Chase Cancer Center; Stephen P. Goff, Columbia University College of Physicians & Surgeons

The first comprehensive review of the enzyme’s biology. Includes rare discussions of RT’s functions outside the context of retroviruses, the latest structural data on RT and a review of the antiviral activity of the enzyme’s inhibitors.

1993, 492 pp., index
Cloth $85 ISBN 0-87969-382-7

Genome Rearrangement and Stability
Genome Analysis, Volume 7
Edited by Kay E. Davies, MRC Clinical Sciences Centre, Royal Postgraduate Medical School, London; Stephen T. Warren, Emory University School of Medicine, Howard Hughes Medical Institute

The first book on the role of repetitive genomic sequences in the origins of human disorders such as fragile X syndrome, myotonic dystrophy and Huntington’s disease. Also reviews studies in organisms such as yeast and trypanosomes that are illuminating the function of DNA once thought of as “junk.”

1993, 165 pp., index
Cloth $49 ISBN 0-87969-388-6
