INFORMATION FOR CONTRIBUTORS (1995)

Aims and Scope

Genes & Development welcomes high-quality research papers of general interest and biological significance in molecular biology, molecular genetics, and related areas. Publication time from acceptance of manuscript is between two and three months. For papers accepted subject to revision, only one revised version will be considered, it must be submitted within 2 months of the provisional acceptance.

Submission of Papers

The journal accepts papers which present original research that has not previously been published. Submission to the Journal implies that a paper is not currently being considered for another journal or book. Closely related papers that are in press elsewhere or that have been submitted elsewhere should be included with the submitted manuscript. It is also understood that researchers who submit papers to this journal are prepared to make available to qualified academic researchers materials needed to duplicate their research results (DNA, cell lines, antibodies, microbial strains, and the like). Authors should submit nucleic acid and protein sequences to the appropriate data bank.

Contributors from North and South America, Asia, and Australia should submit their papers to the Cold Spring Harbor Laboratory office. Contributors from Europe and Africa should submit their papers to the Edinburgh office. Questions regarding papers should be directed to Judy Cuddihy, Managing Editor, at Cold Spring Harbor Laboratory (516-367-8492).

Manuscript Preparation

1. General. Papers should be concise and conform to the following length requirements. Papers accepted by the journal will occupy 5 to a maximum of 10–12 journal pages. Authors of short papers (5–8 pages) are encouraged to submit their manuscripts to the journal. A manuscript of 28–32 typed, double-spaced pages total (including methods, references, tables, and figure legends) with 37 lines of text per page (a manuscript length of 63,000 characters), and with six single-column figures and one single-column table will translate to 10–12 pages in the journal. The entire paper (including tables, figure legends, references, footnotes) should be typed double-spaced on standard-sized European or American bond paper with at least 1-in (2.5 cm) margins on all four sides. Computer printouts should be of letter quality, and should use a computer typeface of at least 11 point size. Each page should be labeled with the first author’s name and a page number. Five copies should be submitted, at least four of these copies should have original art. A cover letter should include: (a) name, address, telephone number, and FAX number of author responsible for correspondence regarding the manuscript; (b) statement that the manuscript has been seen and approved by all listed authors; (c) any specific requirements for reproduction of art; and (d) status of any permissions needed.

2. Submitting Papers on Computer Discs. Publication can be speeded up if accepted papers are supplied on 3½- or 5¼-inch floppy discs. We can accept IBM PC, Macintosh, or compatible formats. Please supply the manuscript on the disc as a "text" or ASCII file, if possible. Indicate on the disc: computer brand name, whether the disc contains a text or word-processing file [name of software], and the disc format. Five hardcopy versions should also be submitted for use by referees and editors.

3. Form. The following order should be followed: Title page, Abstract, Introduction, Results, Discussion, Methods, Acknowledgments, References, Tables, Figure legends. The Title page should include: (a) title; (b) all authors’ full names; (c) all affiliations clearly indicated; (d) a shortened version of the title for use as a running head (maximum 45 characters); and (e) key words (up to 6) for use in indexing. The Abstract should be about 200 words long and should summarize the aim of the report, the methodological approach, and the significance of the results. Methods will appear at the end of the paper and should be detailed enough to allow any qualified researcher to duplicate the results.

4. Figures and Legends. Five sets of figures should be supplied as high-quality glossy prints. Half-tones should be high-contrast, particularly in the case of gels, for the best reproduction. Line drawings, graphs, charts, and chemical formulae should be professionally prepared and labeled. Multiple-part figures should be submitted as mounted, camera-ready compositions. Authors submitting color figures as essential data for review with manuscripts undertake to pay the publication costs of four-color artwork. Price estimates are supplied upon acceptance of the paper.

The back of each figure should be labeled with the first author’s name, figure number, and an indication of "top." The figures should be numbered consecutively in the order to which they are referred in the text. The size of the figures will be adjusted to fit the Journal format, therefore please try to keep labels, symbols, and other call-out devices in proportion to the figure size and detail.

Figure legends should be brief and should not contain methods. Symbols indicated in the figure should be identified in the legend text. If figures are reprinted from another source, permission to reprint is required.

5. Tables. Tabular data should be presented concisely and logically. Tables should be numbered consecutively according to the order cited in the text and each should have a title. Use only horizontal rules and make sure column headings are unambiguous in indicating columns to which they refer. Table legends and footnotes should be included where needed. If tables are reprinted from another source or if data included are from another source, permission to reprint is required.

6. References. References are name/date citations in text; please do not cite by number. Undated citations (unpublished, in preparation, personal communication) should include first initials and last names of authors. Bibliographic information should be supplied in the following order. For Journal articles: Author(s), year, article title, journal title, volume, inclusive page numbers. For books: Author(s), year, chapter title, book title, editors’ names, volume, inclusive page numbers, publisher, city of publication.

7. Proofs. Proofs are considered the final form of the paper and correction can be made only in the case of factual errors. If additional information must be added at this stage, it should be in the form of a note added in proof, subject to the approval of the editors.

8. Reprints. A reprint order form will be included with the proofs.

To help defray the cost of publication, a charge of $25 per page will be made for publication in Genes & Development. Authors unable to meet these charges should include a letter of explanation upon acceptance for publication, inability to meet these charges will have no effect on acceptance and publication of submitted papers.

CONTENTS

A Laboratory Manual

Edited by Carl Dieffenbach, M.D.

PCR Primer: A Laboratory Manual

Introduction to PCR

Long-Distance PCR (O.S. Foord, E.A. Rose)

Specificity, Efficiency, and Fidelity of the PCR (R.S. Cha, W.G. Welsh)

PCR Protocol: Rapid Isolation of DNA and PCR Assay for 15-Globin

Setting Up a PCR Laboratory (C.W. Dieffenbach et al.)

A Standard PCR Primer Design

Appendices

Alternative Amplification Technologies

Computer Software for Selecting Primers; Reagents and Equipment

PCR Primer Design

PCR Primers for Different applications

Cloning of PCR Products

PCR Sequencing

PCR Mutagenesis and Site-directed Mutagenesis

PCR Mutagenesis by PCR

Novel Recombinant Genes Using PCR

PCR Site-directed Mutagenesis

PCR-mediated Cloning

Multiplex PCR

Panhandle PCR

Capture PCR

Expression-PCR

Exon Trapping

Differential Display

RT-PCR

RNA PCR

LCR

PCR-based Method for Screening DNA Libraries

Screening of YAC Libraries with Robotic Support

Expression Cloning

Screening for Expressed Genes

Construction of Subtractive Libraries

Expression from Paraffin-embedded Tissues: Sample Preparation and the Effects of Fixation

Characterization of 3SR-based Assays

One-step NASBA

Chemical Cleavage of DNA

Ligase Chain Reaction (M. Weidmann et al.)

Characterization of PCR-amplified DNA

Screening Using Arbitrarily Primed PCR (M. McClelland, J. Welsh)

DNA Fingerprinting Using Arbitrarily Primed PCR (M. McClelland, J. Welsh)

Detection of PCR Products: Quantitation and Analysis

Quantitative Liquid Hybridization

Quantitative Polymerase Chain Reaction Method Employing Storage Phosphor Technology (M.T. Vahey, M.T. Wong)

Use of the SNuPE Assay to Quantitate Allele-specific Sequences Differing by a Single Nucleotide (J. Singer-Sam)

Use of the PCR to Quantitate Relative Differences in Gene Expression

Expression of Products, and Quantitation

Protocols for a wide range of PCR and amplification techniques-each written by an expert investigator-are presented for cloning, recombination in vivo (D.H. Jones); mutagenesis and synthesis of novel recombinant genes using PCR (A.N. Vallejo et al.); rapid sequencing (K. Kretz et al.); cycle sequencing (V.B. Rao); direct sequencing of PCR-amplified DNA (V.B. Rao); and cloning and analysis of PCR-generated fragments (G.L. Costa, M.P. Weiner).

PCR and other amplification techniques in the laboratory are introduced and then the basic aspects of the technology are explained by exploring important issues such as the complex world of PCR by beginning at an accessible level and then moving to more advanced levels of application. First, the practical requirements for performing PCR are introduced and then the basic aspects of the technology are explained by exploring important issues such as the complex world of PCR by beginning at an accessible level and then moving to more advanced levels of application.
