Supplementary Figure 4. Schematic representation of promoter region of miR-8. Two genomic DNA fragments (PR1-miR-8 and PR2-miR-8) were cloned into each of the pGL3 luciferase reporters. Putative binding sites of E74 and BR-C are shown. +1 indicates the pri-miR-8 transcription start site as previously described [Qian J, Zhang Z, Liang J, Ge Q, Duan X, et al. (2011) The full-length transcripts and promoter analysis of intergenic microRNAs in Drosophila melanogaster. Genomics 97: 294-303].
